

**Protect and Maintain
Today—for Huge
Savings Tomorrow.**

EMCOR Services Combustioneer (Combustioneer) is one of the Washington, D.C., Metropolitan Area's leading full-service, single-source mechanical, electrical, and building automation and controls firms. Using today's most advanced technology, Combustioneer helps clients optimize operational efficiency and productivity by integrating a variety of systems—including air conditioning, heating, lighting, power generation, and more. **Combustioneer works to help clients achieve high-performance operation, reduced energy consumption, and maximum cost savings.**

Preventive maintenance is integral to a high-performing facility, and the expert technicians at Combustioneer are prepared to inspect and service clients' most critical systems. Investing in preventive maintenance helps clients keep their facility's systems operating at peak levels of performance—helping to extend the lifespan of valuable mechanical equipment while avoiding costly downtime. Proper preventive maintenance helps catch complications before they develop into significant problems.

Efficient HVAC Systems. Productive Staff and Facilities.

Keeping heating and cooling systems finely tuned helps ensure both the facility and its staff are working and functioning efficiently. Through a robust network of preventive maintenance professionals—from customer service representatives to field HVAC preventive maintenance technicians—clients turn to Combustioneer for the proper function, maintenance, and integrity of a facility's entire HVAC system. Combustioneer's vigilant inspection programs and highly capable staff help keep clients' HVAC systems functioning reliably and smoothly.

Combustioneer provides a range of services for virtually every component of a facility's mechanical, electrical, and automation systems. Services include:

Critical Power Services

Emergency power

Generator service

Preventive maintenance

Mechanical Services

Building automation systems

Customized maintenance programs

Fabrication

HVAC

Industrial and process piping

Plumbing

Engineering, Construction, & Energy Services

Design-build

Energy management and saving services

Engineering and construction

**We Make
Buildings
Run Better.**

Protecting Critical Electrical Systems—while Increasing Energy Efficiency.

Combustioneer can meet a facility's complete electrical service requirements while identifying energy-saving opportunities. Combustioneer's preventive maintenance program and skilled team of electricians protect critical electrical systems and resolve issues that threaten crucial facility operations. By combining preventive programs with integrated electrical systems, Combustioneer helps provide clients with ongoing energy-savings opportunities.

Automated Savings—through Building Automation Services

Combustioneer's building automation services (BAS) provides clients with control and energy-management solutions that can greatly increase a facility's energy efficiency. By providing commercial energy audits or integrating electrical and energy-management solutions into innovative information systems, Combustioneer helps provide clients with faster, more responsive and more economical environmental management options.
